

Ride Booking & Revenue Dashboard

An interactive Power BI dashboard analysing 148.8K ride bookings from 2024: revenue, payments, pickup demand, cancellations, vehicles and ratings.

Overview

This project turns a year of Uber-style ride booking data into a single dashboard that a manager could use to see how the business is doing. It answers four practical questions: how much revenue is the service earning, how do customers pay, where is demand coming from, and how many bookings never reach completion.

The dashboard has five pages, linked by navigation buttons and a date slider that filters every visual at once. This document explains what was built, what the data shows, and what actions could increase revenue, reduce cancellations and improve customer satisfaction.

Item	Detail
Tool	Microsoft Power BI, Excel
Period covered	1 January 2024 to 30 December 2024
Scale	148.8K ride bookings, of which 93K were completed
Dashboard pages	Home, Revenues, Incomplete & Cancellation, Vehicle, Rating
Dataset source	[Add dataset name or link]

148.77K Total bookings	51.85M Total revenue	508.30 Average booking value	93.00K Completed bookings
----------------------------------	--------------------------------	--	-------------------------------------

Figure 1. Home page

Dashboard Features

Component	What it does
Date slider	Sets the start and end date (1 Jan to 30 Dec 2024). Every chart and KPI card on the page updates to the selected period.
Page navigation	Five buttons (Home, Revenues, Incomplete & Cancellation, Vehicle, Rating) let a viewer move between pages without leaving the report.
KPI cards	Four headline numbers: total bookings, total revenue, average booking value and completed bookings.
Revenue by payment method	Column chart comparing revenue from UPI, cash, Uber Wallet, credit card and debit card.
Revenue by month	Area line chart with a label on every month, so seasonality and dips are visible at a glance.
Top 7 pickup places	Column chart ranking the seven pickup locations with the most bookings.

The five pages

Page	Purpose
Home	Landing page and entry point to the rest of the report.
Revenues	Revenue, payment mix, monthly trend, booking volume and top pickup places.
Incomplete & Cancellation	Bookings that were cancelled or not completed, and why.
Vehicle	Performance by vehicle type.
Rating	Customer and driver ratings.

Key Insights from the Revenues Page

- **UPI is the leading payment method.** It brings in 23.35M of the 51.85M total, about 45% of revenue. Cash is second at 12.90M (about 25%). Digital methods together (UPI, Uber Wallet, credit and debit cards) make up about 75%.
- **Revenue is steady through the year.** Monthly revenue stays close to the 4.32M average, ranging from 4.09M in February to a peak of about 4.57M in March. February is also the shortest month, which explains part of its dip.
- **The weakest months after February are September and August.** They come in at 4.19M and 4.24M, while October recovers to 4.42M.
- **Demand is spread evenly across pickup places.** The top seven locations range from 949 bookings (Khandsa) to 918 (AIIMS), a gap of only about 3%. No single hotspot dominates.
- **Many bookings are not completed.** Only 93K of 148.8K bookings (about 62.5%) were completed, so roughly 55.8K bookings, about 37.5%, were cancelled or incomplete. This is the largest opportunity in the data.

Recommendations

These recommendations are based on the figures above. The cancellation and satisfaction actions should be confirmed against the Incomplete & Cancellation and Rating pages before they are rolled out.

1. Increase revenue

Action	Why	Metric to track
Move cash riders to digital payments	Cash is still about 25% of revenue. Small cashback or wallet offers can shift riders, which also speeds up payment and settlement.	Revenue share by payment method
Lift the slow months	February (4.09M), September (4.19M) and August (4.24M) are the weakest. Targeted promotions or corporate ride passes can fill them.	Monthly revenue vs the 4.32M average

Action	Why	Metric to track
Repeat what worked in peak months	March and October led the year. Identify the cause (events, weather, offers) and plan pricing and driver supply around it.	Revenue per month, year on year
Raise average booking value	At 508.30 per booking, premium vehicle options and long-trip bundles can lift the value of each ride. Use the Vehicle page to find high-value categories.	Average booking value by vehicle type
Balance drivers across pickup zones	Demand is almost equal across the top seven places, so placing drivers evenly keeps wait times low and avoids lost bookings.	Bookings and wait time per zone

2. Reduce the cancellation rate

Action	Why	Metric to track
Find the main cancellation reasons first	With about 37.5% of bookings not completed, split them by driver-side and customer-side reasons and fix the biggest cause first.	Cancellation rate by reason
Reduce driver cancellations	Show trip distance and fare before the driver accepts, reward completion streaks and apply penalties to repeat cancellers.	Driver cancellation rate
Shorten pickup waits	Match the nearest driver and show an accurate arrival time. Long or unclear waits push riders to cancel.	Cancellations vs wait time
Discourage late customer cancellations	Offer a short free-cancellation window and a small fee after it, with a reminder message when the driver is close.	Customer cancellation rate
Recover failed bookings	Re-match the rider to a new driver immediately and offer a small discount after a failed ride.	Share of failed bookings re-booked

3. Improve customer satisfaction

Action	Why	Metric to track
Find weak spots in the ratings	Break average rating down by vehicle type, location and driver to see where service falls short.	Average rating, share of ratings below 3
Follow up low ratings quickly	Ask for a reason after a low rating and contact the rider within 24 hours.	Time to resolution, repeat bookings
Coach and reward drivers	Recognise top-rated drivers and offer short training to drivers with low scores.	Driver rating trend
Hold vehicles to a standard	Compare ratings across vehicle types and upgrade or remove the weakest ones.	Rating by vehicle type
Make payments smooth	UPI carries almost half of revenue, so handle failed payments cleanly and refund incomplete rides automatically.	Payment failure rate, refund time

Skills Demonstrated

- Data visualisation: KPI cards, column charts, area charts, slicers and button navigation in Power BI.
- Dashboard design: a multi-page layout with a consistent theme and a global date filter.
- Business analysis: turning revenue, payment and booking numbers into clear insights.
- Recommendation writing: linking each suggested action to a metric that can be tracked.
